

SUPASCRAPER

Would you welcome a labour saving device to clean your yard?

Do you want to cut down unproductive yard cleaning time?

Is reducing water costs and usage important to you?

Do you want to contribute towards maintaining the environment?

The Supascraper cleans yards of all sizes quickly, efficiently and cost effectively. The angled rubber blade ensures effluent can be easily scraped into a disposal system as recommended in Fonterra's Market Focused Programme, an environmental quality system to assist farmers in meeting their environmental obligations.

International standards show 22 litres of effluent is produced per cow, per day. On average 3.6 litres of this is deposited in the yard. Multiply this by the number of milking days (270) and each cow produces 972 litres a year. There are approximately 4.3 million cows in New Zealand so that's 4.1 billion litres of effluent a year that has to go somewhere. The Supascraper helps channel this into recommended disposal systems quickly and easily with minimal outlay and significantly reduces contaminated water run-off from yard cleaning.

Approximately 20,000 litres of water a day is used hosing down the average yard, wasting up to one hour of valuable time. Using the Supascraper before hosing has been proven to cut down water usage by up to two thirds and reduces the total cleaning time by half, thus saving valuable man-hours, water and therefore dollars. This saving is further qualified by the expert prediction of a severe global water shortage within our lifetime.

The Supascraper is also beneficial to yards with cleaning systems already in place. It is proven to increase cleaning effectiveness when used in conjunction with floodwash and tipper drums systems.

The Supascraper is built to withstand years of continual use. The frame is hot-dipped galvanised to protect from rusting by acidic cow dung. The tough rubber blade is fabricated from three layers of moulded-in nylon webbing to help rigidity and extend the life of the rubber. The blade is guaranteed for two years.

Already used by thousands of dairy farmers throughout New Zealand, Australia and the USA, the Supascraper will save you money, time and water – can you afford not to have one?

can you afford not to have one?

AVAILABLE IN THESE SIZES

- MINI** (1.2m)
FOR SMALLER YARDS AND HERRING BONES
- REG LAR** (1.4m)
FOR UP TO 250 COWS
- J MBO** (2.0m)
FOR OVER 250 COWS
